### Comments

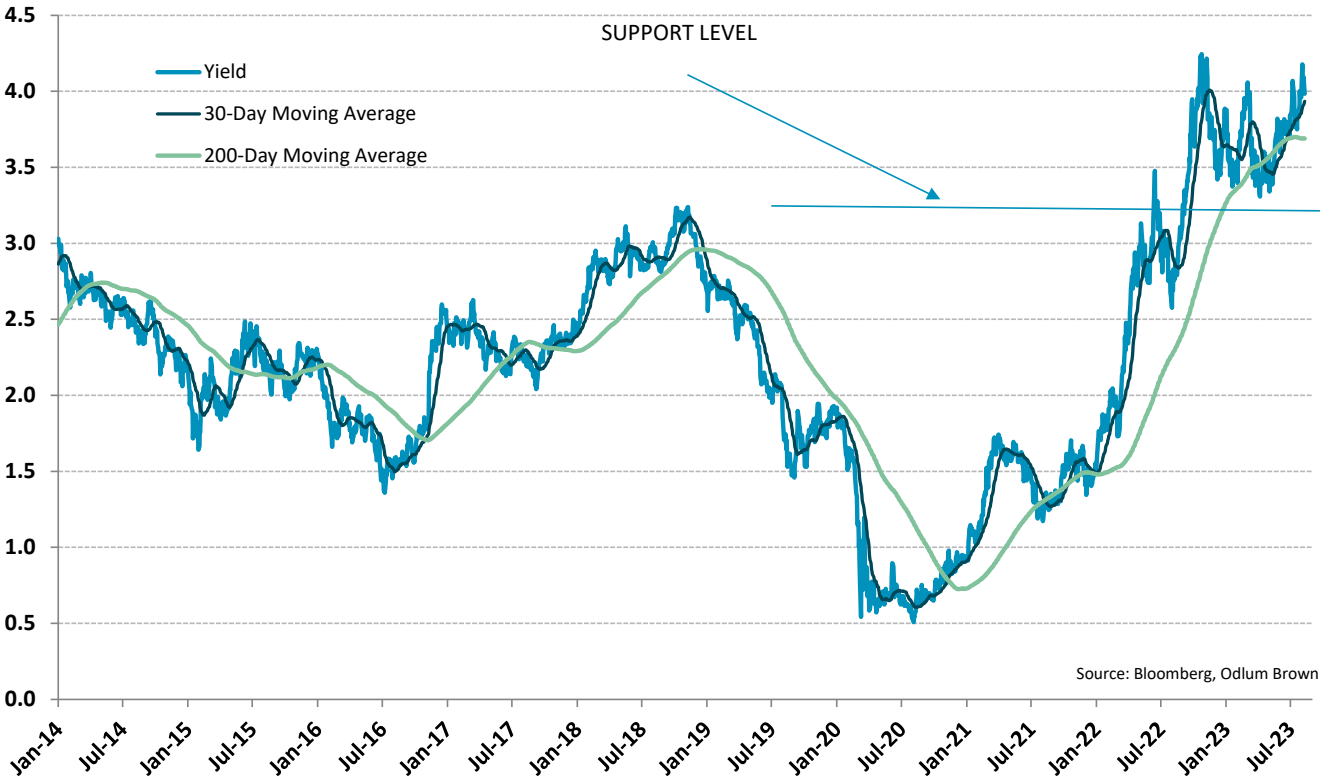

Short-term interest rates and bond yields rose in July and have moved higher thus far in August. Both the Federal Reserve and the Bank of Canada raised their key lending rates by 25 basis points. Market yields, measured by the U.S. 10-year note, rose a modest 12 basis points in July and reached a high of 4.18% on August 3 before settling back to 4%.

There were several factors contributing to these rising yields: Fitch's downgrade of U.S. sovereign debt; a U.S. Treasury borrowing program of \$1 trillion for the current quarter; a move towards monetary tightening by the Bank of Japan; consumer confidence reaching a two-year high; several strong economic releases, including the important employment numbers, with two strong ADP reports plus buoyant housing prints; and the revision of U.S. Q1 GDP up to 2.4% from 1.8%.

All of this occurred against a backdrop of improving inflation. The U.S. experienced back-to-back modest CPI releases, with the headline rate just over 3% while the year-over-year core rate remained at a stubborn 4.7%. Recession forecasts have been downgraded in the wake of all this news.

# U.S. 10-Year Treasury

Yield (%)

This bond re-challenged the 4.25% level and is at a 10-year high.

## U.S. Two-Year / 10-Year Yield Spread

Source: Bloomberg, Odium Brown

**The yield curve remains inverted near record levels for this cycle. Of note is that the inversion has improved by 25 basis points as two-year yields did not rise with 10-year yields.**

**High yield bond spreads remain near their lows for the past year.**

## Outlook

Inflation remains at the forefront of factors influencing bond yields and there is little doubt that it has crested globally. After two relatively mild CPI prints in the U.S., the market believes the Fed will pause in September but will likely hike again in November. Fed Chair Powell is on record saying he would like to see several encouraging inflation reports before reconsidering the Fed's monetary stance. However, the factors that contributed to the recent increase in yields are likely to prevent market yields from retracing lower. Such factors include the resilient economy, the \$2.3 trillion annual borrowing requirement by the U.S. Government, the Bank of Japan's move to tighten, buoyant consumer confidence, and ongoing firmness in the important employment and housing sectors. Moreover, the Bank of Japan's decision to allow their 10-year bonds to move another 50 basis points higher, towards 1%, may cause Japanese investors to repatriate some of their foreign holdings, thereby putting upward pressure on bond yields. They own more than \$1 trillion worth of U.S. Treasuries.

The strength in corporate bond markets and the accompanying tightening of yield spreads with government bonds argues against a recession this year. Thus, bond yields could challenge 4.25% again in the U.S. 10-year maturity. Rallies are possible, which could bring their yield down to 3.5%. Interestingly, the latest rise in the 10-year note was not matched by the movement in two-year yields. The yield curve is now less inverted by 25 basis points and this trend should continue.

Also of important note, the recent decline in the inflation rate, combined with the rise in interest rates and bond yields, has produced something not seen in years – positive real yields! The Fed Funds Rate at 5.5%, is now decidedly punitive. Investors can earn a pre-tax real yield and borrowers are incurring a real cost of funds.

Fixed income investors have earned meager returns this year. As measured by the FTSE Bond Universe Index, year-to-date returns have been just over 1%. Corporate bonds have returned more than double that. For the remainder of the year, fixed income investors will likely realize positive, but modest returns.

### Strategy

Inflation remains the chief enemy of the bond market and bond market returns. While we may be close to the end of the monetary-tightening cycle, we believe interest rates will remain elevated and possibly rise further during the remainder of the year. The Fed and the Bank of Canada will not ease monetary policy anytime soon. Consequently, we recommend maintaining a short-duration, high-quality portfolio. This approach has proven to be effective in providing income while, importantly, protecting principal value.

Is this the time to extend the average term of one's fixed income portfolio? It's an important question. Year to date, the bond market has produced a modest 1.08%, as measured by the FTSE Universe Index. Fixed income investors are being paid to wait with current short-term yields, which could move even higher depending on central bank actions.

We continue to advocate the use of floating-rate debentures, whose coupons should remain well above 5% even if central banks pause, in combination with a one- to five-year ladder of high-quality corporate and provincial bonds. The net result is a short-duration, high-yielding portfolio. We have recommended adding federal and provincial bonds to portfolios to enhance liquidity and credit quality in the event of some stress appearing in corporate credit.

This year's increase in yields has caused bonds issued at lower yields to trade at deep discounts to their par values. These bonds are attractive for taxable accounts, as the capital gains component of the overall return is taxed at preferential rates. While most of these bonds have rallied, considerable discounts remain. We have created the **Odium Brown Discount Corporate Ladder** portfolio to take advantage of this opportunity and note there are a number of Government of Canada bonds available at deep discounts as well.

We also recommend using the **Odium Brown Corporate Bond Ladder**, which features more current coupon bonds in combination with individual floating-rate bonds. The **Odium Brown Model Portfolio** is well positioned for this market environment with short-duration and floating-rate debentures included.

We have adopted the use of outside bond investment managers to augment returns. Our top recommended funds are:

- **Picton Mahoney Liquid Alt Fund.** This is a well-managed long/short fund and is available as an ETF.
- **Canso Short-Term and Floating Rate Fund.** This fund protects principal and takes advantage of opportunities in the floating rate market.
- **Canso Corporate Value Fund.** This is a well-managed, long-only corporate bond fund.

Please consult your Investment Advisor or Portfolio Manager for more details and to discuss this strategy.
